

## ***Nexcess Announces UK Magento Hosting Services***

Ann Arbor, Michigan U.S.A., April 27, 2011- Nexcess, a Magento Enterprise Hosting Partner, has announced expansion into the [UK Magento hosting](#) market. This effort has been designed to better serve the company's current and future eCommerce hosting clients by providing lowered latency throughout Europe and Asia.

"We're very excited to be bringing 10+ years of eCommerce experience to the European web hosting market," commented Chris Wells, President & CEO of Nexcess, "We knew that many of the specialized Magento hosting solutions that Nexcess provides are of great value to the European eCommerce webmaster, and wanted to deliver these services at lower latencies than we were capable of providing from our Dearborn, Michigan data center."

This announcement builds upon a steady progression of Magento hosting innovations produced by Nexcess throughout Q1 2011, and is intended to be the first of many future international expansions. On February 28th, enterprise Magento users were met with an array of new solutions via Nexcess' Magento-focused complex cluster hosting product, which included the Nexcess Content Delivery Network (CDN), a service designed to help diminish latency for global Magento hosting clients and their end users.

Effective immediately, clients will be able to request Enterprise Magento hosting solutions at the new facility located in Surrey, United Kingdom, where the same caliber of service supplied by Nexcess' U.S.-based facilities can be expected. In brief, this will include N+1 uninterruptible power, N+1 HVAC cooling and 24/7 support from Nexcess' highly trained U.S.-based staff.
